

For each pair of equations, use chips to find the numbers that work.
Numbers in matching shapes must be the same.

$$\begin{array}{l} \text{Hexagon} + \text{Circle} = 10 \\ \text{Circle} - \text{Hexagon} = 4 \end{array}$$

$$\begin{array}{l} \text{Hexagon} + \text{Circle} = 8 \\ \text{Hexagon} - \text{Circle} = 4 \end{array}$$

$$\begin{array}{l} \text{Circle} - \text{Hexagon} = 2 \\ \text{Hexagon} + \text{Circle} = 12 \end{array}$$

$$\begin{array}{l} 3 + 7 = 10 \\ 7 - 3 = 4 \end{array}$$

$$\begin{array}{l} 6 + 2 = 8 \\ 6 - 2 = 4 \end{array}$$

$$\begin{array}{l} 7 - 5 = 2 \\ 5 + 7 = 12 \end{array}$$
